

Program Mission:

Preparing qualified women in the field of environmental sciences by providing a distinctive educational environment to meet the requirements of the labor market.

Program Goals:

1. Providing students with theoretical, scientific and research foundations in the field of environmental and ecological sciences
2. Providing students with the general skills required by the labor market
3. Develop students' skills to solve environmental issues and make a mark in preserving natural resources
4. Providing students with modern technologies in the field of environmental sciences to compete effectively in the labor market
5. Evaluate the significance of current ecological and environmental issues, and manage conservation and environmental protection assessments
